At the pinnacle of his profession and powers, Christian de Portzamparc is a shining star in the firmament of high design. Pritzker Prize-winning architect Christian de Portzamparc is renowned for bold yet artful architecture that is at once sensitive to its context while at the same time being novel, adventurous, and frequently exciting. One57, the soaring residential skyscraper in New York, with unparalleled views of Central Park, is perhaps his most famous building in the United States, but his work ranges widely across the globe, from an

extraordinary handkerchief puff-shaped boutique for Christian Dior in Seoul to a low-winged arabesque of a building for the wine producer Cheval Blanc to a mysterious temple of the modern for Casarts in Casablanca. This volume, the first major comprehensive book on Portzamparc's work in more than three decades, is a revelation and a comprehensive survey of the work of one of the world's most innovative and exciting architects at the height of his powers. In *Revolution or Renaissance*, D. Paul Schafer subjects two of the most powerful forces in the world - economics and culture - to a detailed and historically sensitive analysis. He argues that the economic age has produced a great deal of wealth and unleashed tremendous productive power; however, it is not capable of coming to grips with the problems threatening human and non-human life on this planet. After tracing the evolution of the economic age from the publication of Adam Smith's *The Wealth of Nations* in 1776 to the present, he turns his

attention to culture, examining it both as a concept and as a reality. What emerges is a portrait of the world system of the future where culture is the central focus of development. According to Schafer, making the transition from an economic age to a cultural age is imperative if global harmony, environmental sustainability, economic viability, and human well-being are to be achieved. *Becoming and Being* presents an analysis and comparison of two influential modern approaches to the doctrine of God. Though they are in many respects diametrically opposed, the one finding its basis in biblical revelation and steeped in the tradition of trinitarian reflection, the other relying on pure speculative reason, there are numerous and surprising points of contact. What is the score card for economics at the start of the new millennium? While there are many different schools of economic thought, it is the neo-classical school, with its alleged understanding and simplistic advocacy of the market, that has

become equated in the public mind with economics. This book shows that virtually every aspect of conventional neo-classical economics' thinking is intellectually unsound. Steve Keen draws on an impressive array of advanced critical thinking. He constitutes a profound critique of the principle concepts, theories, and methodologies of the mainstream discipline. Keen raises grave doubts about economics' pretensions to established scientific status and its reliability as a guide to understanding the real world of economic life and its policy-making. Ranging from the earliest drama to the theater of the 1980's this encyclopedia includes coverage of national drama and theater around the world, theater companies, and musical comedy. Arrangement of the 1,300 entries is alphabetically by name or subject with nearly 950 of these devoted to individual playwrights and their works. *Intellectual Jazz* is about the discipline of philoscience. Philoscience is about the interpretation and critique of science and

other disciplines. Equilibrium versus Understanding argues that neo-classical theory is incapable of explaining or understanding human conduct. The author asserts that a different sort of economic theory is required and proposes a hermeneutic one. The book presents a comprehensive description and analysis of the methodologies involved, ultimately rejecting the positivist "Fascinating and important . . . a work of prodigious scholarship, covering the entire history of Western thought and treating both literary and medical discourses with subtlety and verve." ---Louis Sass, author of *Madness and Modernism* "The scope of this book is daunting, ranging from madness in the ancient Greco-Roman world, to Christianized concepts of medieval folly, through the writings of early modern authors such as Shakespeare, Cervantes, and Descartes, and on to German Romantic philosophy, fin de siècle French poetry, and Freud . . . Artaud, Duras, and Plath." ---Isis "This provocative and closely argued work

will reward many readers." ---Choice In *Revels in Madness*, Allen Thiher surveys a remarkable range of writers as he shows how conceptions of madness in literature have reflected the cultural assumptions of their era. Thiher underscores the transition from classical to modern theories of madness—a transition that began at the end of the Enlightenment and culminates in recent women's writing that challenges the postmodern understanding of madness as a fall from language or as a dysfunction of culture. *A Grammar of Christian Faith* is a two-volume set that aims to confront the widespread disarray in the language and practices of Christian faith today. As a 'grammar,' it explains how Christian faith provides special ways of speaking and acting that make sense of human life by giving it meaning, practicality, and hope. It advances the thesis that learning how to speak Christian language in worship and life is crucial to learning how to be a Christian. Rather than supposing that Christian language and theology

need continual updating in order to be relevant to the world, Jones urges the church to recover anew how Christian concepts and understanding are intended to form Christian life in all its rich depths. Construing theology as confessional theology in the context of the church, Jones understands the church as that liberative and redemptive community called into being by the Gospel of Jesus Christ to witness in word and deed the triune God for the benefit of the world. The full range of doctrinal themes that are deemed essential to the witness of the church are explored, including clear explanations of why they are essential and how they are to be understood. In pursuit of a truthful and beneficial witness of the church, the work centers on a trinitarian understanding of God, in which God freely and lovingly interacts with the world as Creator, Reconciler, and Redeemer. The work throughout affirms the belief that the gracious triune God is the Ultimate Companion who will redeem all creation. The Greek-born

Italian painter Giorgio de Chirico is a master of metaphysical painting. This fully illustrated catalogue presents de Chirico's work in relation to the world and myths of classical antiquity. Jane Austen is often thought of as a secular author, because religion seems absent from her novels, because she satirises her clerical characters, and because history and literacy criticism - and the literary sensibility of the twenty-first century reader - is overwhelmingly secular. Michael Giffin offers a reading of Austen's published novels against the background of a 'long eighteenth century' that stretched from the Restoration to the end of the Georgian period. He demonstrates that Austen is a neoclassical author of the Enlightenment who writes through the twin prisms of British Empiricism and Georgian Anglicanism. His focus is on how Austen's novels mirror a belief in natural law and natural order; and how they reflect John Locke's theory of knowledge through reason, revelation and reflection on

experience. His reading suggests there is a thread of neoclassical philosophy and theology running through and between each of Austen's novels, which is best understood in its cultural context. Educated Western Christians seek to understand the scientific basis of evolution as well as to justify why a God worth worshiping can be responsible -- yet not indictable -- for evil. The author creates an innovative theological framework that addresses these concerns and provides part of a structure for fundamental theology which is based on the neoclassical metaphysics of Charles Hartshorne and the speculative cosmology of Alfred North Whitehead. His model of the divine has three basic principles: God is love, God is the creator, and this creativity is an integral part of divine essence. From this model, he develops a fundamental theology which focuses on the nature of divinity, the interaction between human and the divine, and divine revelation. He attributes much of his own concept of revelation

to Whitehead's model in which revelation is indicative of a successful communion between human and divine. This revelation is achieved through symbolic mediation and it is as much inter-personal reconciliation as it is a universal resonance of the creative essence between heaven and earth. This framework shows initial agreement with Christian traditions; it is highly coherent, universal in scope and, most importantly, it has rich potential for future Christian understanding. This book, spanning the years 1650-1730 in France and England, looks primarily at the history of literary criticism during that period in order to show how the rising interest in the sublime pushes literary critics to entirely alter their approach to theorizing works of literature. It provides a new approach to understanding how eighteenth-century aesthetic theories are indebted to seventeenth-century religious, philosophical, and literary ideas. Charles Hartshorne's considerable writings have been influential in contem 1

porary religious and philosophical thought. Not only is he regarded as the leading living representative of process thought as well as a much respected interpreter of Whitehead, but he has also established himself as an original and creative thinker in his own right. The literature on his philosophy has been rapidly increasing. His thought and influence have also been the subject of a number of conferences and gatherings of scholars. One of Hartshorne's most notable contributions to contemporary philosophy and theology is his concept of God. In his writings he has set out "to formulate the idea of deity so as to preserve, perhaps increase, its religious value, while yet avoiding the contradictions which seem inseparable from the idea as customarily defined." The result of his efforts has been the development of the concept of a "dipolar God" (insofar as contrasting metaphysical predicates, e.g. relative/absolute, contingent/necessary, finite/infinite and so on, are affirmed as applicable to God although

always in an eminent way). Inasmuch as he has elaborated this concept in close dialogue with classical theism, he also refers to it as "neo-classical". Because of the emphasis he places on the reality of change and becoming in his metaphysics (which regards God as the chief exemplification of metaphysical principles), the term "process" has likewise been used to describe his notion of God. "In this study, Jerry Korschmeier examines how an evolutionary perspective impacts on a traditional understanding of original sin. He reviews the history of the doctrine as well as the church's interaction with the theory of evolution. Using clues provided by evolution and process thought, the author suggests an interpretation of original sin that incorporates both modern Catholic scholarship and scientific evidence. Ultimately, he moves toward a theology of evolution."--BOOK JACKET. Title Summary field provided by Blackwell North America, Inc. All Rights Reserved Mounting evidence suggests that GDP

growth is damaging the natural environment and unlikely to be ecologically sustainable in the long-run. At the same time, an annual GDP growth rate of around three percent is regarded as the minimum necessary to prevent unemployment from escalating. Clearly, a trade-off exists between environmental goals and employment goals, yet this trade-off has been largely ignored or denied. This book aims to resolve the environment-employment dilemma by suggesting ways and means to achieve low rates of unemployment, or preferably full employment, in the context of a low-growth or steady-state economy. In search of a solution to this dilemma, this book seeks to answer the following questions: What existing paradigms offer a possible foundation for further investigation into issues dealing with both the environment and employment? What specific initiatives can be implemented to deal with unemployment given that any potential solution must be consistent with responsible

macroeconomic policy? To what extent can ecological tax reform provide a solution to the environment-employment dilemma? Under what circumstances is it clear that certain forms of employment generation are antithetic to the goal of ecological sustainability? How can more favourable employment-generating opportunities be exploited in ways which lower unemployment or achieve full employment without the need for ecologically-destructive GDP growth? This book will no doubt stimulate a broader discussion on the issue, and it may just begin a process that leads to the eventual emergence of a viable policy strategy to generate a sustainable, full employment future. This book will be of interest to decision-makers, civil servants, researchers, and NGO employees as well as students of environmental and ecological economics and issues related to employment and unemployment. In the early 1960s, the Alvin Ailey American Dance Theater was a small, multi-racial company of dancers that performed

the works of its founding choreographer and other emerging artists. By the late 1960s, the company had become a well-known African American artistic group closely tied to the Civil Rights struggle. In *Dancing Revelations*, Thomas DeFrantz chronicles the troupe's journey from a small modern dance company to one of the premier institutions of African American culture. He not only charts this rise to national and international renown, but also contextualizes this progress within the civil rights, women's rights, and gay rights struggles of the late 20th century. DeFrantz examines the most celebrated Ailey dances, including *Revelations*, drawing on video recordings of Ailey's dances, published interviews, oral histories, and his own interviews with former Ailey company dancers. Through vivid descriptions and beautiful illustrations, DeFrantz reveals the relationship between Ailey's works and African American culture as a whole. He illuminates the dual achievement of Ailey as an artist and as an arts activist

committed to developing an African American presence in dance. He also addresses concerns about how dance performance is documented, including issues around spectatorship and the display of sexuality, the relationship of Ailey's dances to civil rights activism, and the establishment and maintenance of a successful, large-scale Black Arts institution. Throughout *Dancing Revelations*, DeFrantz illustrates how Ailey combined elements of African dance with motifs adapted from blues, jazz, and Broadway to choreograph his dances. By re-interpreting these tropes of black culture in his original and well-received dances, DeFrantz argues that Ailey played a significant role in defining the African American cultural canon in the twentieth century. As the first book to examine the cultural sources and cultural impact of Ailey's work, *Dancing Revelations* is an important contribution to modern dance history and criticism as well as African-American studies. *Debunking Economics* exposes what many non-economists may have

suspected and a minority of economists have long known: that economic theory is not only unpalatable, but also plain wrong. When the original Debunking was published back in 2001, the market economy seemed invincible, and conventional 'neoclassical' economic theory basked in the limelight. Steve Keen argued that economists deserved none of the credit for the economy's performance, and that 'the false confidence it has engendered in the stability of the market economy has encouraged policy-makers to dismantle some of the institutions which initially evolved to try to keep its instability within limits'. That instability exploded with the devastating financial crisis of 2007, and now haunts the global economy with the prospect of another Depression. In this radically updated and greatly expanded new edition, Keen builds on his scathing critique of conventional economic theory whilst explaining what mainstream economists cannot: why the crisis occurred, why it is proving to be

intractable, and what needs to be done to end it. Essential for anyone who has ever doubted the advice or reasoning of economists, Debunking Economics provides a signpost to a better future. In *The Gospel in the Western Context*, Gert-Jan Roest presents how Hendrikus Berkhof and Colin Gunton read the Western context and contextualize Christology. In "dialogue" with them he presents a Western gospel for mission in the 21st Century. The *American Journal of Islamic Social Sciences (AJISS)*, established in 1984, is a quarterly, double blind peer-reviewed and interdisciplinary journal, published by the International Institute of Islamic Thought (IIIT), and distributed worldwide. The journal showcases a wide variety of scholarly research on all facets of Islam and the Muslim world including subjects such as anthropology, history, philosophy and metaphysics, politics, psychology, religious law, and traditional Islam. This book initiates a dialogue between Marxism and ecological economics. It shows how Marxism

can help ecological economics fulfill its commitments to methodological pluralism, inter-disciplinarity, and openness to new visions of structural economic change that confront the current biospheric crisis. Handsomely illustrated and engagingly written, *New York Modern* documents the impressive collective legacy of New York's artists in capturing the energy and emotions of the urban experience. This study of self-employment of women in Finland covers the period 1960-1990. Contrary to suggestions that self-employment is a way out of gender-based subordination in employment, it shows that self-employment does not equal liberation from patriarchal relations in paid work. Ruskin, the great Victorian critic of art and society, had an enormous influence on his age and our own. A highly successful propagandist for the arts, he did much both to popularize high art and to bring it to the masses. A brilliant theorist and practical critic of realism, he also produced the finest nineteenth-century discussions of fantasy,

the grotesque, and pictorial symbolism. Most who have written about this outstanding Victorian polymath have approached him either as literary critics or as art historians. In this book, which was first published in 1985, George P. Landow provides a more balanced view and offers a strikingly new approach which reveals that Ruskin wrote throughout his career as an interpreter, an exegete. His interpretations covered many fields of human experience and endeavour, not only paintings, poems, and buildings but also contemporary social issues, such as the discontent of the working classes. *The Handbook of Choice Modelling*, composed of contributions from senior figures in the field, summarizes the essential analytical techniques and discusses the key current research issues. The book opens with Nobel Laureate Daniel McFadden calling for d This book provides a comprehensive overview of the development of economics from its beginnings, at the end of the Middle Ages, up to contemporary developments.

It is strong on contemporary theory, providing extensive coverage of the twentieth century, particularly since the Second World War. The second edition has been revised and updated to take account of new developments in economic thought. An unprecedented exploration of Stravinsky's use of the piano as the genesis of all his music - Russian, neoclassical and serial. *Becoming and Being* presents an analysis and comparison of two influential modern approaches to the doctrine of God. Although they are in many respects diametrically opposed, the one finding its basis in biblical revelation and steeped in the tradition of trinitarian reflection, the other relying on pure speculative reason, there are numerous and surprising points of contact. The second edition offers a new conclusion by the author, in which he responds to his critics, and reflects on how his views have changed and remained the same in the intervening years. While providing useful portraits of its two central thinkers, Barth and

Hartshorne, the book will also serve as a fine introduction to the rational basis of theology, as well as providing insight into some of the perennial questions arising from belief in God. A selection of republished corporate finance articles and book chapters that can serve as an advanced corporate finance supplementary text for courses that use no textbooks. Combining convenience and an affordable price with retypeset pages and a high-quality index, the 600 pages of volume one, "Takeover Activity, Valuation Estimates and Sources of Merger Gains", focus on classical issues such as the existence and source of merger waves, empirical estimates of takeover announcement returns and the division of takeover gains between bidders and targets, and tests for potential sources of takeover gains (primarily involving estimation of industry wealth effects of takeovers), introducing students to modern scientific evidence about corporate takeovers. Including an index and new introduction, this volume will

simplify and facilitate students' interaction with new concepts and applications. Provides a status report about modern scientific evidence on corporate takeovers Exposes students to new methods and empirical evidence while reading high quality primary material Offers a concise and cost-efficient package of journal and book articles for advanced corporate finance students The legacy of ancient Greece and Rome has been imitated, resisted, misunderstood, and reworked by every culture that followed. In this volume, some five hundred articles by a wide range of scholars investigate the afterlife of this rich heritage in the fields of literature, philosophy, art, architecture, history, politics, religion, and science. First published in 1996. Routledge is an imprint of Taylor & Francis, an informa company. Despite some diversification modern economics still attracts a great deal of criticism. This is largely due to highly unrealistic assumptions underpinning economic theory, explanatory failure, poor policy framing, and a

dubious focus on prediction. Many argue that flaws continue to owe much of their shortcomings to neoclassical economics. As a result, what we mean by neoclassical economics remains a significant issue. This collection addresses the issue from a new perspective, taking as its point of departure Tony Lawson's essay 'What is this 'school' called neoclassical economics?'. Few terms are as controversial for pluralist and heterodox economists as neoclassical economics. This controversy has many aspects because the term itself has different specifications and connotations. Within this multiplicity what we mean by neoclassical matters to pluralist and heterodox economists for two primary reasons. First, because it informs how we view and critique the mainstream; second, because the relationship between heterodox and mainstream economics influences how heterodox economists model, apply methods and construct theory. The chapters in this collection each have different

things to say about these matters, with contributions ranging across the work of key thinkers, such as Thorstein Veblen and Kenneth Arrow, applied issues of non-linear modelling of dynamic systems, and key events in the history of economics. This book will be of use to those interested in methodology, political economy, heterodoxy, and the history of economic thought. This book provides an introduction to the theory of support-bargaining and money-bargaining. Support-bargaining arises from the propensity of all individuals to seek the support of those around them and is the underlying mechanism of democratic societies. It is also the underlying mechanism of theory formation. Intellectual support-bargaining is the process by which support is assembled for ideas and theories. Mainstream economic theory, or 'neoclassical theory', can be seen as formulated to advance individual interest. It is mainstream because it has assembled sufficient support to give it ascendancy in academia. It reconciles private

and public interest in a mathematical account of resource allocation. Money-bargaining, in contrast, explains the process of economic exchange. Transactions are based on information, so that the character of information itself influences the conduct of exchange. This volume provides a radically new explanation of the functioning of human societies that will be recognised as entirely consistent with common observation and experience. This is the first book published in English on the new international value theory, presented by Yoshinori Shiozawa in 2007. Shiozawa submitted a solution to the question on international values since Ricardo by constructing a Ricardo-Sraffa model on trading economies with M countries and N commodities including intermediate inputs (normally $M < N$). The new theory is based on the assumption that prices are determined by production costs, which is the property derived from the classical value theory. The papers collected here deal with the following:

introducing readers to the new theory; presenting diagrammatic illustrations of the new theory; analysing efficient patterns of specialization allowing intermediate inputs; examining how the new theory gives a new horizon to the Neo-Ricardian trade theory; investigating competitiveness, the long-period method, and potentiality from the perspectives of the new theory; discussing Mill's conversion toward neoclassical revolution; scrutinizing how the concept of comparative advantage has developed and diverged from Ricardo's trade theory; discussing the purification of Marshall's value theory through Mill's influence; reviewing the controversies on international values among Japanese economists; considering the value-added trade based on the Ricardian value theory; and lastly giving a mathematical explanation of the definitions and theorems of the new theory.

pp If God were an artist, what kind would he be? The possibilities are endless. Just like his love. Since God is the Alpha and

Omega, Abigail has chosen twenty-six different styles of art to describe her Savior. She's praying that each reader would be drawn closer to God and begin to see his artistic beauty in the world around them. Tsarist Russia's commercial class is today receiving serious attention from both Russian and non-Russian historians. This book is a contribution to that literature.

Commerce in Russian Urban Culture, 1861-1914 examines the relation between the entrepreneurial world, especially business and banking, and the cultural milieu of Russia. Going beyond the commercial-cultural connection of charitable activity, the contributors to this collaborative project also study cultural activity undertaken by enterprises for their own purposes, notably bank and commercial architecture. "Culture and commerce" encompasses two areas in this volume. The first is the business milieu itself as a social and cultural phenomenon. Class and social stratification, types of entrepreneurs, and their

mentality, religious affiliations, and charitable activities and donations are covered. The second is their impact on the form of cities, including not only Moscow and St. Petersburg but Odessa and Nizhnii Novgorod. Banks, insurance companies, and large commercial firms reshaped Russian cities with the construction of buildings for their own operations and retail shops, stock exchanges, mansions, and public buildings. This book is based on a project of the Kennan Institute for Advanced Russian Studies at the Woodrow Wilson International Center for Scholars. The most comprehensive and up-to-date English-language guide on hadith scholarship The source of much of our knowledge of the first two centuries of Islamic history, the hadith literature is made up of thousands of traditions collected during the formative years of Islam. Alongside the Qur'an, the hadith forms a second major body of Islamic scripture, and much of Islamic belief and practice rests on the hadith including Islamic

law, Islamic theology, Qur'anic interpretation, political thought, and personal behavior. Yet despite its importance to Muslims worldwide and its indispensable role as a source for early Islamic history, the hadith remains unexplored territory for many non-specialist readers. The Wiley Blackwell Companion to the Hadith is a concise yet comprehensive overview of both Islamic and Western traditions of hadith study, offering up-to-date scholarship and providing readers with an essential guide to this distinctive aspect of Islam. Written by a multidisciplinary team of distinguished scholars, the Companion discusses questions of authenticity, epistemology and authority in the hadith and explores the relationship of the hadith literature to other ways of transmitting knowledge and establishing authority. Covers the origins of hadith, the application of hadith within the Islamic intellectual tradition, and contemporary revaluations of hadith literature Addresses developments in modern scholarship about the

origins of Islam and Islamic law which are rooted in a reevaluation of hadith Presents new and groundbreaking research from international scholars from divergent perspectives to present an accurate and lively overview of the field Explores the emergence of skepticism about hadith among western scholars Surveys the evolution of a wide range of approaches to hadith among modern Muslims Filling a significant gap in current literature in the field, The Wiley Blackwell Companion to the Hadith is a valuable resource for students, scholars, and researchers in Islamic studies, Islamic law, history, and theology.
