Time Apr 22 2022 Why are there morning people and night people? How come time flies when you're having fun and three minutes can sometimes seem an eternity? Would time exist if we didn't measure it and why is there never enough of it? Our modern lives are ruled by minutes and hours. We race from one thing to the next, all of us believing on some level that a mysterious cosmic force called time is ticking on. And it's always in short supply. But is the time we live really like that? Could there in fact be another, alternative version, entwined with the official one? Here Stefan Klein explores the hidden dimensions of time, looking at everything from when the present becomes the past to the tribe that see the future backwards, from when sex is best to why the years seem to

speed by as we age. And he reveals how we can learn to live in harmony with the secret clock within us, altering our perceptions to transform our lives. To be enjoyed in the morning or the evening (depending on your body clock), this book will make you think the next time you check your watch ♦ and maybe even slow down a little.

Economics: The User's Guide Aug 15 2021 From the internationally bestselling author and prizewinning economist--a highly original guide to the global economy. In his bestselling 23 Things They Don't Tell You About Capitalism, Cambridge economist Ha-Joon Chang brilliantly debunked many of the predominant myths of

neoclassical economics. Now, in an entertaining and accessible primer, he explains how the global economy actually works-in real-world terms. Writing with irreverent wit, a deep knowledge of history, and a disregard for conventional economic pieties, Chang offers insights that will never be found in the textbooks. Unlike many economists, who present only one view of their discipline, Chang introduces a wide range of economic theories, from classical to Keynesian, revealing how each has its strengths and weaknesses, and why there is no one way to explain economic behavior. Instead, by ignoring the received wisdom and exposing the myriad forces that shape our financial world, Chang gives us the tools we need to understand our increasingly global and interconnected world often driven by economics. From the future of the Euro, inequality in China, or the condition of the American manufacturing industry here in the United States-Economics: The User's Guide is a concise and expertly

crafted guide to economic fundamentals that offers a clear and accurate picture of the global economy and how and why it affects our daily lives.

[AdS/CFT Duality User Guide](#) Jul 02 2020 This book describes applications of the AdS/CFT duality to the "real world." The AdS/CFT duality is an idea that originated from string theory and is a powerful tool for analyzing strongly-coupled gauge theories using classical gravitational theories. In recent years, it has been shown that one prediction of AdS/CFT is indeed close to the experimental result of the real quark-gluon plasma. Since then, the AdS/CFT duality has been applied to various fields of physics;

examples are QCD, nuclear physics, condensed-matter physics, and nonequilibrium physics. The aim of this book is to provide background materials such as string theory, black holes, nuclear physics, condensed-matter physics, and nonequilibrium physics as well as key applications of the AdS/CFT duality in a single volume. The emphasis throughout the book is on a pedagogical and intuitive approach focusing on the underlying physical concepts. It also includes step-by-step computations for important results, which are useful for beginners. This book will be a valuable reference work for graduate students and researchers in particle physics, general relativity, nuclear physics, nonequilibrium physics, and condensed-matter physics.
