A system of classification of the shapes of meteor echoes is established, and a recording on punch cards of this classification with data on the meteors' physical properties is described. A simple velocity-computation method is described, and a number of statistical relations of shapes and physical properties are computed. The survey covers about 1000 meteors with a comprehensive study of all echo types. It shows some characteristics of the stations and selection effects in the established reduction program. (Author). Understanding games--whether computer games, card games, board games, or sports--by analyzing certain common traits. Characteristics of Games offers a new way to understand games: by focusing on certain traits--including number of players, rules, degrees of luck and skill needed, and reward/effort ratio--and using these characteristics as basic points of comparison and analysis. These issues are often discussed by game players and designers but seldom written about in any formal way. This book fills that gap. By emphasizing these player-centric basic concepts, the book provides a framework for game analysis from the viewpoint of a game designer. The book shows what all genres of games--board games, card games, computer games, and sports--have to teach each other. Today's game designers may find solutions to design problems when they look at classic games that have evolved over years of playing.
